DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1 and 23 rejected under 35 U.S.C. 102(a) as being anticipated by Kleider et al. Kleider et al. teach the signal of interest is converted into a frequency domain representation using a frequency transformation, such as a discrete Fourier transform (DFT) or a fast Fourier transform (FFT). The frequency coefficients found using the frequency transformation are converted to power spectrum and smoothed by a moving average filter, or similar device, to achieve the smooth spectrum illustrated in FIG. 4. which suggest representing the continuous signal as a series of discrete frequency and amplitude values. Note column 4, lines 51-66. Kleider et al. teach the smooth spectrum is histogrammed, as illustrated in FIG. 5, which is interpreted as creating a histogram based on the discrete frequency and amplitude values (which are inherent to the a discrete Fourier transform (DFT) or a fast Fourier transform (FFT)). Note column 4, lines 51-66. Kleider et al. teach the smooth spectrum is histogrammed, as illustrated in FIG. 5, to determine the noise floor level of the signal of interest (i.e., the peak of the histogram) which is interpreted as deriving a noise floor estimate from characteristics of the histogram. .Note column 4, lines 51-66. the apparatus

elements would be inherent to the process steps of Kleider et al. described above.

Response to Arguments

3. Applicant's arguments with respect to claim 1 and 23 have been considered but are moot in view of the new ground(s) of rejection. Applicant argues that the histograms taught by Higgins et al. are not based on the discrete frequency and amplitude values of continuous signal representation. Kleider et al. teach this limitation and is addressed in the rejection above.

Allowable Subject Matter

4. Claims 2-22 and 24-39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Demetrius R. Pretlow whose telephone number is (703) 272-2278. The examiner can normally be reached on 8-4:30.
